PROJECTS

Stock Market Performance Analysis – Global Investment Insights [Power BI | DAX |Excel| Data visualization]

Sole developer

May 2025-June2025

- Developed an interactive Power BI dashboard to analyze global stock market trends using historical data across countries and sectors.
- Designed key visuals to evaluate price volatility, regional performance, and time-based market behavior to support mid- to long-term investment strategies.
- The dashboard empowers investors and analysts to make data-driven decisions, with potential to reduce risk and optimize portfolio returns by identifying high-performing and stable markets. [<https://bit.ly/3InxRBG>]

Volunteer Coordination System

Sole Developer

Nairobi, Kenya

April 2024 -Dec 2024

- Designed and developed a full-stack web application to connect volunteers with organizations based on skill sets, interests, and availability, improving opportunity discovery and engagement.

- Integrated MySQL with phpMyAdmin for data storage and management.
- Implemented a custom matching algorithm to suggest opportunities to volunteers based on their Profile.

Data-Driven Sales and Customer Insights –Retail Analysis [Python | Machine Learning | Visualization]

Team Member

Dec- 2024

- Conducted descriptive analytics on Retail data to identify top selling products, analyze sales trends, and evaluate employee performance leading to data-driven decision making.
- Performed customer segmentation based on purchase history and product preference to enhance targeted marketing efforts and customer acquisition strategies.
- Developed and implemented machine learning models to analyze sales data and generate actionable insights for optimizing business operations.
- Visualized complex data analysis results using tools like scatter plots, feature importance charts, and price distribution comparison to effectively communicate findings to stakeholders.

Product Verification System

Team Member

Nairobi, Kenya

April 2023- July-2023

- Developed a Verification system using PHP,CSS, JavaScript and Laravel that would allow customers to request a verification of the product they intend to buy from a vendor, which would then be carried out by a trusted third party.
- Implemented system functionalities to allow all users to perform various functionalities, streamlining the process of verification of goods purchased
