SOFTWARE ENGINEER

Results-driven Full Stack Developer with hands-on experience building responsive web applications, integrating APIs, and delivering scalable digital solutions using JavaScript, React, Python, and modern development tools. Skilled in creating user-friendly interfaces, supporting backend connectivity, and writing clean, efficient, and maintainable code in agile and project-based environments

SKILLS

Programming Languages – Python (Advanced), JavaScript (Advanced), SQL(Advanced), PHP.

- I have a strong understanding of multi-paradigm programming, memory management, and performance optimization across various languages.

Backend Development – Python (Flask, Django), SQL Database Management, NodeJS, ExpressJS, Laravel .

- I have expertise in designing and implementing RESTful and GraphQL APIs with authentication and authorization using JWT, OAuth, and API security best practices, and integrating with SQL databases for high-performance backend systems.

Databases - SQL(Advanced), MySQL, PostgreSQL & MongoDB.

- I am skilled in writing complex SQL queries, optimizing database performance, indexing, query optimization, database migrations, and designing scalable data architectures.

DevOps and Cloud Technology Tools – Docker, GitHub Actions, AWS.

- I have hands-on experience in deploying and scaling Python applications with containerized environments, managing cloud infrastructure, and automating CI/CD workflows.

Monitoring and Performance Optimization Tools – Grafana, Loki & Prometheus.

- I am proficient in SQL database monitoring, log aggregation, real-time alerting, and system performance tuning.

Version Control and Collaboration: Git

- I am experienced in distributed version control, branching strategies, and collaborative development workflows.

Project Management & Agile Methodologies- Agile, Scrum, Project lifecycle & Documentation (Swagger for API documentation)

- I have a strong understanding of agile workflows, sprint planning, backlog management, and maintaining comprehensive technical documentation.

Technical Writing & Documentation

- I am proficient in writing API documentation, system design specs, and in-depth technical guides for developers and stakeholders

Other Development Tools & Technologies – CI/CD Pipelines, AWS, Jira, WebSockets & Unit Testing.

- I have experience in securing, optimizing, and scaling distributed applications, along with conducting automated testing and logging for fault detection.

Soft Skills – Adaptability, Intrapreneurship, Strong Work Ethics, Collaboration and Teamwork, Excellent Communication Skills.

- I have a strong problem-solving ability, leadership in technical discussions, and a proactive approach to team collaboration.

Software Development Principles - Data Structures and Algorithms, Test-Driven Development & Object-Oriented Programming.

- I am Proficient in writing clean, maintainable, and efficient code, leveraging best practices for scalability and reusability.

WORK EXPERIENCE

Wondrous Publishing — *Software Engineer*

Dec 2025 – Feb 2026

- Designed, developed, and maintained responsive web applications and internal digital tools to support publishing operations, content workflows, and customer engagement.
- Built user-friendly front-end interfaces using HTML, CSS, JavaScript, and React, improving usability, accessibility, and mobile responsiveness across web platforms.
- Developed reusable UI components and implemented dynamic features to streamline content presentation, user interactions, and digital product navigation.
- Integrated RESTful APIs and backend services to support data exchange, content retrieval, form submissions, and workflow automation.
- Collaborated with content, editorial, and operations teams to translate business requirements into scalable technical solutions.
- Improved application performance, resolved bugs, and optimized web pages for speed, maintainability, and better user experience.
- Participated in testing, debugging, deployment support, and ongoing maintenance of digital platforms and web-based systems.
- Used Git/GitHub for version control, code management, and collaborative development workflows.

- Supported implementation of secure coding practices and ensured reliability of web features across multiple devices and browsers.
- Contributed to continuous improvement of digital systems by proposing feature enhancements and technical upgrades aligned with business needs.

Mogast Uniforms — *Frontend Developer Apprentice*

Aug 2025 – Nov 2025

- Supported the development of a responsive e-commerce platform for uniform products, building user-friendly frontend features that improved digital customer experience and online product accessibility.
- Developed reusable frontend components and integrated them with backend APIs to enable seamless product display, form interactions, and responsive user journeys.
- Collaborated with UI/UX designers to implement intuitive layouts, product pages, and interface elements aligned with modern usability and responsive design principles.
- Worked with backend engineers to integrate Python and SQL-based APIs with frontend modules, ensuring reliable data flow and smooth interaction between the user interface and backend systems.
- Participated in agile team activities including brainstorming sessions, sprint planning, design reviews, and code reviews to support efficient feature delivery and team alignment.
- Built prototypes and MVPs to validate feature ideas quickly, gather feedback, and improve development decisions through iterative testing.
- Documented code logic and technical workflows clearly in Jupyter notebooks, improving collaboration, maintainability, and internal knowledge transfer.
- Contributed to task planning, prioritization, debugging, and execution, helping the team meet deadlines and improve development efficiency.

Cadtech Services — *LLM Engineer*

Jan 2025 – July 2025

- Designed and implemented scalable APIs for seamless interaction with Large Language Models (LLMs), reducing response time by 20% and handling over 1 million requests monthly.
- Developed end-to-end machine learning pipelines for training and deploying LLMs, cutting deployment time and enabling faster iteration cycles.
- Collaborated with cross-functional teams (engineers, data scientists, and product managers) to build user-centric AI features, leading to a 25% increase in user engagement with AI-powered functionalities.
- Conducted rigorous experiments and optimizations, improving model accuracy by 18% while reducing computational costs by 30%, saving thousands of dollars in cloud expenses.

- Troubleshoot and resolved complex software issues, working closely with systems analysts and engineers, reducing bug resolution time and ensuring 99.9% system uptime.

Dalberg Research, Kenya — Python Developer Intern

May 2022 – Dec 2024

- Developed robust backend services using Python, integrating PostgreSQL databases to manage complex user authentication, authorization, and secure data storage solutions.
- Identified and resolved performance bottlenecks, such as inefficient SQL queries and suboptimal algorithms, resulting in a 22% increase in load time efficiency.
- Utilized advanced SQL techniques such as CTEs, Recursive Queries, Indexes and Index Optimization to write complex queries, optimize data retrieval processes, and enhance overall backend performance
- Designed and implemented scalable data architectures, leveraging SQL for efficient database operations, which led to faster response times and improved database query performance.
- Led technical presentations, explaining backend infrastructure, Python-based system designs, performance optimizations to developers and stakeholders, facilitating alignment on project goals.
- Performed data migration and indexing in SQL databases, improving data retrieval efficiency and system scalability for handling growing traffic.
- Architected and optimized backend systems to handle 30% more traffic, implementing load balancing, caching, and horizontal scaling techniques to ensure system resilience and performance under heavy loads.
- Led code reviews to ensure high-quality Python and SQL code, sharing best practices, identifying potential issues early, and enhancing team collaboration and productivity.
- Created and maintained RESTful APIs for backend systems using Python, integrating authentication, authorization, and data validation, resulting in improved microservice communication and reduced data transfer time.
- Developed unit and integration tests to ensure code reliability, achieving 95% test coverage and significantly reducing bugs in production environments.
- Authored comprehensive technical documentation for API development, SQL database integrations, backend architectures, and workflows, ensuring clear communication across development and stakeholder teams.

JKUATES — JUNIOR DATA ANALYST,

Jan 2020-Apr 2022,

Intern role within the data analytics team, delivering insights to optimize business operations:

- Designed SQL queries to manage and retrieve data, improving data accessibility.
- Collaborated with the Data Science team to build predictive models, resulting in an increase in forecast accuracy for clients.
- Monitored and reported on data-related **KPIs**, such as data accuracy rates, processing times, and project deliverable timelines, ensuring optimal performance and adherence to standards.
- Implemented a data visualization solution using PowerBI for the sales team to understand sales trends.
- Pulled data from MySQL and Metabase and handled all the ETL from the DB to run the model to obtain a decision

EDUCATION BACKGROUND

MORINGA SCHOOL — SOFTWARE ENGINEERING Nanodegree Program, November 2025.

POWER LEARN PROJECT — MOBILE APP DEVELOPMENT Bootcamp Program, 2025.

JKUAT — BSc. BIOSTATISTICS, June 2024.
