

TECH SKILLS

- Proficient programming language (python)
- Competent in SQL
- Expert with popular python libraries used in data science (Numpy & Pandas)
- Proficient in Flask-based model deployment
- Skilled in Machine Learning fundamentals & Advanced Machine Learning(Pyspark & AWS), Modelling
- Good grasp of version control systems such as Git

CERTIFICATION

DATA SCIENCE

Sep 2022 - Dec 2022
I.B.M

DATABASE SERVICE

OCT 2022 - Dec 2022
Oracle

SQL

Jan 2023 - May 2023
Udemy

CYBER SECURITY

March 2023 - June 2023
Cisco

ENTERPRISE DESIGN THINKING

March 2023 - April 2023
I.B.M

PROJECTS HIGHLIGHTS

AUTO-SALES CHATBOT

- Developed a web-based Auto Sales Chatbot to assist users with automotive sales data queries. Enabled real-time order information retrieval, benefiting both sales representatives and customers.
- Python, Rule-Based , A.I

UNDERSTANDING CUSTOMER BEHAVIOUR

- Conducted behavior analysis to gain insights into the ideal customer profile, using these insights to develop effective strategies for eCommerce businesses through machine learning models.
- Customer Segmentation, Supervised-learning ,Machine Learning.

DEEP LEARNING FOR PNEUMONIA DETECTION IN X-RAY IMAGES

- Developed a deep learning model for accurate pneumonia detection from chest X-ray images, aiming to improve diagnostic speed and accuracy for healthcare professionals and systems.
- Convolutional Neural Networks, Deep Learning, Image classification, flask framework.

SENTIMENT ANALYSIS

- Implemented a sentiment analysis project utilizing NLP and machine learning to classify text into positive, negative, or neutral sentiments, employing techniques such as classification, text mining, and visualization.
- Natural Language Processing (NLP).

FAKE NEWS PREDICTION

- Developed a fake news prediction system to detect and flag misinformation in real-time, enhancing the integrity and credibility of news sectors.
- Prediction -Model , N.L.P

MENTAL-HEALTH-CORPUS

- Developed a machine learning model using NLP techniques to detect mental health issues from labeled comments in the Mental Health Corpus, focusing on sentiment and toxic language analysis.
- Deep Learning , text-classification, N.L.P

BANK LOAN APPLICATION

- Developed a machine learning model to automate the evaluation of loan applications, aimed at reducing labor costs and minimizing human error. The model predicts loan approval or rejection based on various input variables and optimizes probability thresholds to improve decision accuracy and efficiency.
- Machine Learning, Threshold, Banking.
