Professional Summary

Enthusiastic Telecommunications and Information Engineering graduate with practical experience in ICT systems, software configuration, and database management. Skilled in SQL scripting, JavaScript, and solution development, with a strong foundation in system troubleshooting, process documentation, and digital transformation projects. Eager to apply technical knowledge and problem-solving skills in the e-government solutions space as part of the BQI Technologies Trainee Program.

Education

BSc. Telecommunications and Information Engineering
Dedan Kimathi University of Technology (DeKUT)
2020 – 2025 (Awaiting certificate; completion letter available)

Certifications

- AWS Cloud Practitioner Essentials – AWS Training & Certification (July 2025)
-

Technical Skills

- Software & Databases: SQL Scripting (MySQL, SQL Server), JavaScript (basic development), Python
 - Solution Development: COTS Software Configuration, System Testing, Agile & Waterfall Methodologies
 - Reporting & Analytics: Power BI, Tableau, SSRS/Crystal Reports (familiarity), Excel
 - Tools & Platforms: JIRA, Linux, Windows, Microsoft Office Suite
 - ICT Systems: Network Troubleshooting, Database Management, System Documentation
-

Professional Experience

ICT Network Attachee – Kaisugu Tea Factory (*Jan 2025 – Apr 2025*)

- Assisted in system configuration, software updates, and troubleshooting of ICT infrastructure.
- Documented system processes and supported end-users in resolving technical issues.
- Worked with databases to maintain accurate records and improve data accessibility.

ICT Network Attachee – Kenya Tea Packers Limited (Kericho) (*May 2023 – Aug 2023*)

- Contributed to network and database maintenance, improving system reliability.
 - Collaborated with ICT teams to test, troubleshoot, and optimize system performance.
 - Enhanced technical documentation skills and supported digital transformation efforts.
-

Key Projects

- AI & IoT Livestock Monitoring System: Developed a real-time monitoring solution using Raspberry Pi, Python, and object detection models.
 - Short-Term Load Forecasting: Built predictive models using MATLAB and Python for energy demand forecasting.
 - Load Flow Analysis & HVDC Research: Researched power system integration for high-voltage direct current technology.
-

Core Strengths

- Problem-Solving & Analytical Thinking
 - Adaptability & Quick Learning
 - Strong Communication & Documentation Skills
 - Teamwork & Collaboration
-
