

# Teddy Idd Makau

ICT Officer | IT Infrastructure | Systems Support | Information Security

+254 790124604

teddyiddmakau@gmail.com@gmail.com

Highly dedicated and results-driven ICT professional with over four years of experience supporting enterprise IT infrastructure in a high-demand healthcare environment. Skilled in network administration, system troubleshooting, cybersecurity practices, and ICT operations supporting large user environments. A proactive problem solver with strong analytical skills, known for improving service response times, maintaining high system availability, and safeguarding sensitive institutional data.

## EXPERIENCE

### ICT Officer

Kenyatta National Hospital

06/2020 - Ongoing

Kenyatta National Hospital is one of the largest referral and teaching hospitals in East Africa, operating a large-scale ICT environment that supports clinical and administrative systems.

- **IT Infrastructure & Systems Support** - Provide day-to-day technical management and support of enterprise ICT systems supporting hospital operations. Manage and support 600+ end-user devices including desktops, laptops, printers, and clinical peripherals across multiple departments. Maintain hospital-wide wired and wireless networks with 99%+ uptime, ensuring continuous support for critical healthcare operations. Provide Tier 1 and Tier 2 technical support, resolving 30–50 ICT incidents weekly involving network connectivity, system errors, hardware failures, and user access issues. Reduced average incident resolution time by approximately 25% through improved troubleshooting workflows and user guidance.
- **Information Security & System Integrity** - Contribute to maintaining secure ICT systems that protect sensitive healthcare data. Implement security controls including endpoint protection, access control, and vulnerability monitoring to safeguard patient and institutional data. Support ICT security audits and vulnerability assessments, helping reduce preventable security risks. Ensure compliance with internal ICT security standards and best practices for healthcare data protection..
- **ICT Systems Deployment & Operations** – Support the deployment and maintenance of key hospital digital platforms. Provide operational support for Hospital Management Systems and Electronic Health Records (EHR) used across multiple clinical departments. Coordinate ICT infrastructure projects including hardware upgrades, system rollouts, and vendor-supported deployments. Maintain accurate ICT asset registers covering 2,000+ hardware and software resources, supporting lifecycle management and accountability.

### ICT Intern

Kenyatta National Hospital

02/2017-05/2017

- Assisted in troubleshooting enterprise network infrastructure and computer systems across hospital departments.
- Supported server maintenance, hardware installation, and printer configuration for clinical units.
- Gained hands-on experience in large-scale healthcare ICT operations and system administration.

### Volunteering

- Man Enough Program - Nairobi, Kenya

# TECHNICAL SKILLS

## IT Operations & Infrastructure

Network administration, server support, hardware maintenance, system monitoring

## Cybersecurity

Endpoint security, vulnerability assessment, access control, data protection

## Systems & Software

Hospital Management Systems, EHR platforms, Windows environments, SQL basics

## Professional Skills

ICT project coordination, documentation, user training, stakeholder support

# EXPERTISE

## IT Infrastructure Support

## Network Administration

## Technical Troubleshooting

## Cybersecurity Fundamentals

## Systems Monitoring

## User Support & ICT Training

## Hardware & Software Support

# EDUCATION

Ongoing

## Bachelor of Business Information Technology

Jomo Kenyatta University of Agriculture and Technology-Africa

Completed in 2017

## Diploma in Business Information Technology

Jomo Kenyatta University of Agriculture and Technology-Africa

Completed in 2015

## Diploma in Software Programming

Techno Brain Group

# HIGHLIGHTS

- Maintain ICT infrastructure supporting **600+ users** in a mission-critical healthcare environment.
- Consistently resolve **30–50 ICT incidents per week**, ensuring uninterrupted system access for clinical teams.
- Reduced system incident resolution time by approximately **25%** through improved troubleshooting practices.
- Support systems with **99%+** operational uptime, ensuring reliable hospital operations.
- Manage ICT asset registers covering **2,000+** hardware and software resources.

# CERTIFICATIONS

- CompTIA A+
- Cisco Junior Cybersecurity Analyst
- Cisco Cyber Threat Management
- Cisco Network Defense
- Cisco Endpoint Security
- Cisco Networking Devices & Initial Configuration
- International Computer Driving License (ICDL)
