PROFESSIONAL SUMMARY

Talented DevSecOps Engineer/Senior Software Developer with 6 years of enterprise in deploying and managing complex infrastructure in cloud environments. Proficient in a wide range of tools and technologies including Terraform, Kubernetes, AWS, Python, Go, Bash, Docker, Ansible, Java, Android, Prometheus, Thanos, Grafana, Kibitron, K6, and Robot Framework. Experience in software and mobile development and abroad range of industries including News Media, Mobile Payments, B2B, Restaurant Management, Integrated Commerce and Banking. Solid understanding of full mobile and Software Development Life Cycle (SDLC) including Waterfall and Agile methodologies. Well conversant with version control including CVS, SVN, GitLab and Git. Dedicated to continuously developing, implementing, and adopting new technologies to maximize development efficiency and produce innovative applications.

SKILLS

- GitOps tools: Flux and ArgoCD
- Cloud platforms: Azure, AWS, and GCP
- Infrastructure as code: Terraform, Pulumi, and Crossplane
- Messaging frameworks: RabbitMQ and Apache Kafka
- Monitoring tools: OpenTelemetry, Jaeger, Grafana, Tempo, Dynatrace, Prometheus, and Thanos
- Security tools: Veracode, Sonarqube, and Keyverno
- DevOps tools: Jenkins, GitLab CI/CD, Docker, Kubernetes, Ansible, Tekton, and Flux
- QA tools: Kibitron, Keptn, K6, Artillery, and Selenium

EXPERIENCE

Senior DevSecOps and Cloud Engineer

Cashia Limited | Nairobi, Kenya | Jun 2025-Current

- Led the Monitoring and Observability function, designing and implementing unified strategies across microservices to ensure optimal performance and system reliability.
- Setup and implemented real user monitoring (RUM) for web applications using Grafana Alloy, OpenTelemetry, and Grafana Faro to gain insights into client-side performance.
- Enhanced monitoring with OpenTelemetry, Grafana, Loki, Tempo, and Thanos by establishing standardized Golden Signals for system reliability.
- Integrated alerts and anomaly detection with Slack and Alertmanager to improve observability.
- Implemented anomaly alerting in Prometheus using Z-Score recording rules techniques with Istio, improving the detection of irregular traffic patterns, and service reliability across microservices.

- Acted as the primary Incident Commander during P1/P2 incidents, orchestrating technical resolution teams, and ensuring clear, timely communication to senior management and business stakeholders.
- Developed and delivered detailed Post-Incident Review (PIR) reports, focusing on root cause analysis (RCA), and preventative action plans to drive service stability.
- Currently leading an AIOps initiative using the Facebook Prophet library for anomaly detection in Prometheus time-series data, enabling predictive insights, and reducing incident impact.
- Provided technical support and troubleshooting for cloud-related issues promptly.
- Developed best practices for security compliance in cloud environments consistently.
- Designed and managed secure, scalable, multi-cloud infrastructure across AWS and GCP for application deployment.
- Collaborated with architects and engineers to create networks and systems aligned with business needs and security specifications.
- Executed GitOps workflows with Flux and ArgoCD for automated deployments and faster rollbacks.
- Integrated SonarQube, Trivy, JFrog, and Jenkins into CI/CD pipelines to embed DevSecOps practices, ensuring continuous security scanning, artifact management, and automated quality checks throughout the development lifecycle.
- Set up and integrated ReportPortal for QA testing workflows, enabling centralized reporting, real-time test result analytics, and improved collaboration between QA and DevOps teams.
- Enhanced QA observability by extending test pipelines with Robot Framework automation, reducing manual testing effort, and improving release confidence.
- Set up and integrated Pact Broker for contract testing, enabling seamless collaboration between teams, and ensuring API compatibility and reliability across distributed services.
- Provisioned, managed, and monitored cloud infrastructure (e.g., EC2, Virtual Machines, VPCs, and S3/Storage Accounts) using Infrastructure as Code (IaC) tools like Terraform to ensure consistency and repeatability.

Senior DevSecOps Engineer

Safaricom PLC | Nairobi, Kenya | Aug 2021-Jul 2025

- Implemented a comprehensive observability stack by integrating OpenTelemetry, Thanos, OpenSearch, Tempo, and Grafana for real-time monitoring and logging across distributed systems.
- Utilized Thanos for long-term storage of metrics, and Grafana for advanced visualization and analysis of system performance.
- Integrated PagerDuty, Alertmanager, and OpenTelemetry to create systems for anomaly detection and alerting, significantly enhancing monitoring and incident response.
- Pioneered anomaly detection in Prometheus time series data using Z-Score techniques, integrated with Istio, significantly improving the reliability of microservices by flagging irregular traffic patterns.
- Designed and implemented a secure, scalable, and highly available cloud infrastructure across AWS (EKS, EC2, S3, IAM).
- Provisioned and managed cloud infrastructure using Terraform, ensuring consistency, repeatability, and security.
- Collaborated with the DevSecOps team in the design and implementation of robust CI/CD

pipelines using GitLab and Jenkins.

- Implemented GitOps-based continuous delivery using Flux, automating deployments and ensuring that infrastructure and application configuration were version-controlled and synchronized.
- Leveraged Tekton for building and deploying cloud-native applications, integrating security controls and scans directly into Kubernetes-native CI/CD pipelines.
- Integrated static code analysis (SonarQube) and security scanning (Veracode) into CI/CD pipelines to identify and remediate vulnerabilities early in the development lifecycle.
- Designed and implemented secure architecture for cloud applications, adhering to industry best practices, and regulatory requirements.
- Managed the lifecycle of the SonarQube enterprise license, including utilization review from SonarSource, ensuring continuous service availability, and audit readiness.
- Participated in service capacity planning by analyzing Prometheus and Thanos historical metrics to forecast future resource needs for critical services, ensuring zero performance degradation during peak load events.
- Conducted regular security assessments and vulnerability scans on infrastructure and applications, ensuring compliance with industry standards and regulations.
- Developed internal tools using Python and Bash for automating data processing workflows and internal application maintenance.
- Implemented the Robot Framework for QA pipelines, automating test cases to ensure high-quality software releases.
- Set up and configured Kobiton for quality assurance mobile testing, enabling automated and manual testing on real devices.
- Mentored junior team members and provided technical guidance on best practices in DevSecOps methodologies.

Senior Software Engineer

Adanianlabs Africa | Kenya | Jun 2020-Jul 2021

- Automated infrastructure provisioning using Terraform and CloudFormation, which guaranteed consistent, zero-drift deployments, and reduced manual setup time across all environments.
- Significantly improved code quality and reliability by implementing automated testing frameworks, and enforcing their use across the development lifecycle.
- Expanded application capabilities and service reach by integrating critical third-party APIs, supporting new features for the user base.
- Accelerated product delivery by developing, testing, and maintaining core software applications using Java technologies.
- Enhanced software usability and user satisfaction by actively collaborating with UI/UX designers to integrate user-centric design improvements.
- Ensured efficient project delivery and stakeholder visibility by strictly utilizing Agile methodologies to manage project timelines and deliverables.
- Reduced knowledge transfer friction and minimized future maintenance costs by thoroughly documenting software designs and architecture.
- Secured business continuity by devising and implementing automated backup and recovery protocols to ensure data preservation and integrity.
- Strengthened application security posture by conducting security assessments and

implementing robust access controls, authentication, and encryption measures.

- Successfully launched the Ecobba startup product by designing and developing the complete Android application and backend services using a modern stack (Java, Kotlin, Node.js, Express.js, and MongoDB).
- Enabled key user functionality (e.g., transactions and logistics) by implementing user registration, secure payment integration, and real-time location tracking (Google Maps API, and Firebase).
- Ensured the product directly met market demand by actively collaborating with designers and product owners to align application functionality with precise user needs.
- Achieved high scalability and operational cost efficiency by deploying backend services on AWS, strategically leveraging serverless architectures (AWS Lambda and API Gateway).

Senior Android Developer

Mobitech Technologies | Kenya | Feb 2019-May 2020

- Assisted in writing Python scripts for automating log file analysis and extracting key metrics for troubleshooting.
- Gained hands-on experience with Linux system administration tasks, such as file permissions, process management, and shell scripting.
- Designed and implemented intuitive user interfaces, ensuring a seamless user experience, and adherence to design guidelines.
- Integrated Android applications with backend services using RESTful APIs, handling data synchronization, and real-time updates.
- Implemented data persistence using SQLite, ensuring efficient and reliable storage of application data.
- Conducted unit testing and integration testing to identify and fix issues, ensuring application stability and performance.
- Worked closely with backend developers to define API requirements, and troubleshoot integration issues.
- Utilized AWS services such as EC2, S3, and Lambda for cloud-based application development and deployment.

Senior Software Engineer

EldoHub Innovation Center | Kenya | Jan 2018-Jan 2019

- Led the development of a cloud-based inventory management system, utilizing AWS infrastructure and microservices architecture.
- Designed and implemented scalable and efficient backend systems using Node.js, Express.js, and MongoDB.
- Developed and maintained front-end systems using React and Material UI, ensuring a seamless user experience.
- Utilized Docker and Kubernetes for containerization and orchestration, ensuring high availability and scalability of the system.
- Conducted code reviews and implemented automated testing to ensure code quality and maintainability.
- Led a team of developers, providing technical guidance and support throughout the software development lifecycle.
- Utilized Jira for effective project management, ensuring timely delivery and effective

communication with stakeholders.

- Familiarity with security frameworks and standards, such as OWASP and Sonarqube, and experience in incorporating these into the software development lifecycle.

EDUCATION

Bachelor of Science: Computer Science

Dedan Kimathi University of Technology | Nyeri, Kenya | December 2019

Coursework: Algorithms and Data Structures, Operating Systems, Computer Networks, Database Systems, Object-Oriented Programming, Software Engineering, Cybersecurity, Cryptography, Network Security

Master of Science: Artificial Intelligence

The Open University of Kenya | Nairobi, Kenya

- Major in: AI

CERTIFICATIONS

- CKS
- CKA
- CKAD
- Terraform Associate
- Android Developer
