

Hello

I'm ROSE ATIENO ODHIAMBO

01000 NAIROBI

(254) 757-764865

odhiamborose466@gmail.com

SOCIALS

LinkedIn: [LinkedIn](#)

X: [X](#)

Github: [GitHub](#)

SKILLS-

Languages: JavaScript/TypeScript, Java, C#

Frameworks & Libraries: React/Next.js, Angular, .NET, SpringBoot, Tailwindcss, Bootstrap, [Bun.js](#), Express.js

ORMs: Drizzle, Sequelize, Hibernate, EF Core, Dapper

Databases: PostgreSQL, PostGIS, MySQL, MariaDB

Tools & Services: RabbitMQ, Paystack, Novu, H3, Git, Docker, CI/CD, AWS, Coolify, Cloudflare

EXPERIENCE

APRIL 2024- FEBRUARY 2026

E&M TECHNOLOGY HOUSE, Tatu City, Kiambu - *Software Developer, Software Support*

Technologies: SpringBoot, MariaDB, MSSQL, Apache Kafka

- Held regular client meetings via Google Meet to troubleshoot system issues, gather requirements, and provide technical support.
- Performed deployment changes, monitored releases, and ensured smooth rollout of new features and fixes.
- Onboard new sacco in the system. Explain to them how the system works - work around the system.
- Support the clients' day-to-day activities, i.e., if they have any clarification they need for over 300+ Saccos across Kenya and Uganda
- Working as a part of the Credit Tracker Team, design and build service APIs that let the user view and keep track of their credit score, which is a key factor in deciding the creditworthiness of an individual.

- Introduced a mechanism to send SMS and email notifications to the existing customer base, resulting in an almost 15% increase in the returning customer base. This trustworthy base is used for cross-selling other products.
- Part of a team that built a payment gateway for core SACCO banking services, decreasing the customer drop-offs for these services.
- Automated Loan reminders via sms
- Built a middleware microservice to integrate Sacco and Coop Bank Services in the existing Sacco system. This increased efficiency in withdrawal, deposits, mini statement services, and loan services.
- Working as part of the Trade Finance Team, designing the letters of credit, and system configuration of bank guarantees

JUNE 2023 - JULY 2025

YOUR NEXT HOME, Remote - Software Developer

Technologies: Nodejs with Express and Sequelize, [PostgreSQL](#), [React.js](#), RabbitMQ, OAUTH, PostGIS, AWS RDS, Docker, GitHub Actions

- Developed a comprehensive property management system for real estate operations, streamlining listings, tenant management, and property transactions
- Implemented property search and filtering functionality to enhance user experience and accelerate property discovery for tenants and buyers
- Engineered advanced location-based search leveraging PostgreSQL PostGIS for geospatial indexing, enabling distance calculations, boundary searches, and map-based property discovery
- Implemented secure authentication and authorization using JWT, OAUTH(Google Sign In)

LANSTAR TECHNOLOGIES (On-Site, Nairobi Westlands)

Software Developer Attachee'

May 2023 - July 2023

Responsibilities:

- Designed and generated reports using Jasper Reports with JavaEE and MySQL.
- Documented APIs in Redmine for easy reference and team collaboration.
- Developed and maintained APIs, collaborating closely with team members to ensure seamless software integration.

- Support Client Issues

EDUCATION

JAN 2021 - APRIL 2023

EGERTON UNIVERSITY, NAKURU, KENYA - *Degree*

Bachelor of Science in Computer Science

PROJECTS

Core Banking System-In this project, I developed a robust and comprehensive core banking system designed to streamline and manage the daily operations of financial institutions. The system encompasses a wide range of functionalities, including transactions, customer accounts, loans, deposits, and other financial services. Also integrated the system with banks such as I&M and Co-operative Bank to improve service delivery.

Qare + Health App

This app provides quick access to licensed doctors, nurses, nutritionist for urgent and non-urgent care

AUGUST 2025 - Present

Technologies: Bun.js, Drizzle ORM with PostgreSQL, AWS RDS, S3, Cloudflare, Coolify, Docker, Next.js

- Implemented a geospatial appointment system using H3 hexagonal hierarchical indexing to enable efficient location-based scheduling and service area mapping
- Architected scalable notification infrastructure integrating Expo Push Notifications for mobile alerts and Novu for multi-channel messaging, with RabbitMQ message queue for reliable scheduled notification delivery
- Developed an asynchronous notification scheduling system using RabbitMQ to handle time-based reminders, ensuring consistent delivery of appointment confirmations and updates at scale.
- Integrated Paystack payment gateway to enable secure transaction processing for appointment bookings and service payments
