Objective

Detail-oriented Data Scientist with hands-on experience in data analysis, statistical modeling, and machine learning. Skilled in transforming complex datasets into actionable insights and building predictive models to support data-driven decision-making. Seeking to leverage expertise in data visualization, model development, and cloud-based analytics to deliver innovative solutions and drive business impact in a forward-thinking organization.

Experience

- American Data Exchange Corporation (ADEC)** October 2024 - Present
Data Analyst (Hybrid- remote and onsite)
 - Data preparation: clean, organize, and structure large datasets for analytics, ensuring high accuracy and efficiency.
 - Data Quality Assurance: implement checks and audits to identify inconsistencies, correct errors and improve integrity of data.
 - Data Validation: conduct thorough data validation processes to verify that data aligns with business rules and standards, minimizing risks and enhancing reliability.
 - Used Microsoft excel to clean data
 - Postgress SQL: use SQL queries to explore data, load the data into the database and fetch the data from the database
 - Conduct ETL processes
- Freelance Data Scientist** October 2023 - Present
Data science & machine learning (part time Remote)
 - Cleaning and preprocessing datasets for analysis, identify missing values, outliers, and inconsistencies
 - Data analysis and Visualization using tools like excel, SQL, python, R, and Power BI to perform data analysis and create compelling visualizations that communicate findings effectively.
 - Conducting exploratory data analysis on large datasets for sales records uncovering factors influencing sales success which lead to strategic decision making.
 - Statistical Analysis using methods and techniques such as regression Analysis, predictive modelling and ensuring data driven decision making.
 - Implementing machine learning models such as classification, regression and clustering using scikit-learn library.
 - Experimental research on AI such as bias and fairness in machine learning models, explainable AI using tools such as Shap or Lime, sustainable AI development, forecasting prevention and mitigation of malicious use of AI.
 - Writing AI research proposals, such as financial risk prediction, predictive maintenance.
 - Conducting research on emerging trends in AI such as Red and green AI, AI for social good, AI technologies for sustainable development
 - Creating Microsoft word reports and PowerPoint presentation on research findings
- Computer Pride Limited** January 2022 - March 2022
Intern
 - Contributed to the Customization of Sage 200 ERP financial solution for businesses.
 - Developed financial software solutions for clients using a variety of technologies such as HTML, CSS, and PHP, assisting in system analysis, design and testing.
 - Trained clients on the Sage ERP software system, ensuring they were able to use it efficiently and effectively.
 - Worked closely with senior developers to resolve technical issues and improve system performance.
 - Participated in team meetings and provided valuable input to project planning and execution.
 - Assisting clients with software usage using remote desktop application (team viewer/Anydesk).

Education

- Chuka university** 2019-2023
Bsc Computer Science
Second class honours (upper Division)

Skills

- Team work
- Strong Analytical and Problem Solving
- Excellent Time Management
- Self Driven
- Able to work independently or as a team
- Project management
- Critical Thinking
- Microsoft office Suite
- Database Management (SQL)
- Data visualizations, Machine Learning, Statistical Analysis
- Programming Languages(python, R)
- Tableau, poweBI for story telling from data

Projects

- **Ethical Bias in AI Hiring**

Conducted an experimental research of causes of biased in AI systems. Used Employment dataset with demographic features such as age, gender, ethnicity, education to identify available biases present in the data. Developed a series of machine learning models and evaluated them on not only accuracy but also fairness using fairness metrics. I then motivated the available biases using Bias mitigation techniques. Reported the findings

- **Financial Risk Forecasting**

Used cryptocurrency data to predict the risk of losing cryptocurrency. The aim of the project was to find out how time series models can perform in forecasting the volatility and risk measures of cryptocurrencies. This was also an experimental research.

- **APower BI Dashboard**

business Intelligence project where the Salesforce CRM was implemented, a realtime database to solve business problem. PowerBI was used to build Dashboards and identify various factors influencing sales.

- **AI and Cybersecurity**

Experimental research on how AI can be used to enhance cybersecurity. Developed federated learning framework for detecting various cybersecurity attacks.

Interests

- Fascinated with using Artificial intelligence and machine Learning to build predictive models and automate decisions
- Passion for Transforming complex Datasets into visually compelling and easy to understand insights.
- Commitment to staying updated with new technologies, methodologies, and industrial trends
- Key interest in understanding how data insights influence business strategies, customer behaviour and market trends
