

SUMMARY

Full-stack Software Engineer with **3+ years of experience** building secure, scalable, and high-performance web applications using **Next.js**, **Node.js**, and **PostgreSQL**. Proven track record in developing RESTful APIs, optimizing backend systems, integrating third-party services, and deploying production-grade apps. Adept in CI/CD practices, agile collaboration, and writing clean, maintainable code. Passionate about solving real-world problems through technology while continuously learning and adopting modern tools.

SKILLS	EDUCATION
Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS	Bachelor's degree
Backend: Node.js, Express.js, Nest.js, Hono.js, RESTful APIs, Microservices	Computer system engineering
Database: PostgreSQL, MongoDB, SQL	Kirinyaga University – (2019- 2024)
Tools & DevOps: Git, GitHub, GitHub Actions, Docker, Vercel, Render	
Auth & Security: JWT, OAuth2	
Other: CI/CD, Agile/Scrum, Stripe Integration, SSR/SSG, Performance Optimization	

WORK EXPERIENCE

Software Engineering (Skylab Systems Limited)	Nov 2024 – current
- Developed and maintained scalable software solutions, contributing to a 20% increase in platform stability and 15% faster page load times through performance optimization and refactoring. - Enhanced user experience by implementing clean, testable code practices, resulting in a 30% reduction in post-release bugs across core features. - Collaborated with analysts and architects to deliver robust, modular applications, reducing technical debt by 25% and accelerating feature delivery cycles. - Designed localized solutions to support multilingual users, leading to expanded market reach and a 10% increase in user retention in non-English regions. - Conduct functional testing and system analysis, ensuring 95% on-time project delivery and adherence to high-quality standards in production environments.	
Software Engineering (TheJitu)	Jun 2022 – Aug 2024
- Spearheaded internal code reviews and tech talks, mentoring junior developers and helping reduce onboarding time by 40% for new hires. - Developed RESTful API services using Node.js and Express, supporting scalable backend systems that handled over 10,000 user requests daily without service degradation. - Implemented payment processing with Stripe, enabling seamless recurring billing and reducing payment failure rates by 12% through proper error handling and retries. - Tuned PostgreSQL database queries to support large datasets, trimming heavy query execution times from 2.3 seconds to under 700ms. - Worked cross-functionally with designers, QA, and product managers to ship production-ready features, contributing to a 92% feature adoption rate post-launch.	

Projects

SMILE (Stanford Mobile Inquiry-based Learning Environment) | [live link](#)

Led frontend development of a responsive web app using React and Next.js for Stanford University's inquiry-based learning platform. Built dynamic UI components, handled state management, and integrated real-time features to support student-generated questions and peer assessments. Delivered a user-friendly interface that enhanced student engagement, collaboration, and higher-order thinking in global classrooms.

Vehicle rental management system | [github link](#) | [live project link](#)

Used reactjs, redux toolkit and typescript for frontend and nodejs and hono.js to incorporate RESTful API service. I used PostgreSQL to manage the data and drizzle orm for data interaction. The system included user authentication, vehicle management, booking operations, payment processing integrated with stripes and admin dashboard for managing vehicle, users and bookings.

Books management | [frontend](#) | [backend](#) | [live project link](#)

Developed a book collection web app using React.js, Node.js, TypeScript, Hono.js, Drizzle ORM, and PostgreSQL, streamlining book management processes. It includes user authentication, sending confirmation mail and reset password mail. Enabled users to add, delete, update, and view book details, tracking reading progress effectively. This project improved user engagement by 60% and reduced the time spent on book management tasks by 50%.

Certificates

Software development training program | [Certificate](#)

Successfully completed software development training at teach2give. The training covered advanced topics in web development including html, css, Javascript, Typescript, Reactjs, Nodejs, honojs, drizzle orm and PostgreSQL database.

Javascript certification | [Certificate](#)

Completed a comprehensive course on Javascript covering fundamentals and advanced topic including DOM manipulation, event handling and asynchronous programming.
