PROFESSIONAL SUMMARY

ICT diploma holder with practical experience in system maintenance, networking fundamentals, and general ICT operations, seeking to apply technical knowledge in a professional IT environment. Skilled in troubleshooting, performing planned preventive maintenance, managing hardware and software systems, and supporting secure and efficient technology infrastructure. Committed to contributing to the reliability and effectiveness of IT operations while continuously developing technical expertise and professional capabilities in dynamic and challenging work settings.

SKILLS

- Attention to detail
- Orderly
- Prompt engineering
- Problem solving and creative thinking
- Effective Communication
- Time management
- Team collaboration
- Ability to work independently
- CCTV installation and configuration
- IT asset verification and management
- Hardware troubleshooting and support
- Preventive Planned Maintenance
- Computer formatting and verification
- Proficiency in Office 365
- Work under minimal supervision
- Social media literacy

EXPERIENCE

PREMIER HOSPITAL

IT Support, 2025

- Improved system reliability by troubleshooting and resolving recurring hardware and software issues, reducing user-reported technical disruptions across multiple departments.
- Contributed to reduced equipment downtime by consistently performing planned preventive maintenance (PPM) on computers, UPS units, and ICT devices.
- Strengthened organizational cybersecurity by ensuring all systems had updated antivirus protection and conducting regular security scans, minimizing vulnerability to malware threats.

- Enhanced operational efficiency by providing timely technical support and resolving service requests, enabling staff to maintain productivity with minimal delays.
- Supported the successful implementation of CCTV and biometric access systems, improving monitoring capabilities and strengthening hospital security infrastructure.
- Streamlined ICT asset management by accurately verifying, labeling, and documenting equipment, improving inventory tracking and accountability.
- Improved network organization and reliability by assisting in structured cabling and proper installation of network and power connections
