

Energy and Environmental Technology Engineer

Energy Consumption Analysis | Equipment Performance Evaluation | Energy-Saving Solutions Implementation | Occupational Health and Safety (OHS) Compliance | Risk Assessment and Hazard Analysis | Precision Metal Part Manufacturing | Plant Machinery Operation and Maintenance | Machinery and Equipment Assembly and Installation | Metal Casting and Molding Processes | Data Analysis and Interpretation | Microsoft Office | Automotive Servicing | Energy and Environment | Control and Instrumentation | Data Analysis | AutoCAD | Sales | Green Energy | Environmental Technology

Tel : +254720814700 | Email : thiongo1236@gmail.com | Location : Nairobi Kenya

PROFESSIONAL SUMMARY

A graduate and industrious engineer with a positive and enthusiastic attitude, driven by a passion for Energy and Environmental Technology. Known for exceptional organizational skills, efficiency, and meticulous attention to detail, contributing to successful project outcomes. Adept at managing energy and environmental technology operations, with proven abilities in team supervision and project leadership. Brings a blend of creativity and innovation to problem-solving, ensuring continuous improvement and operational excellence. Highly adaptable to evolving industry trends, with strong communication and interpersonal skills that foster effective collaboration and engagement across diverse teams.

Career Strengths

- ☑ **Microsoft Excel:** Expertise in data analysis, reporting, and process automation to support decision-making.
- ☑ **Microsoft PowerPoint:** Ability to create compelling presentations for effective communication of technical and business insights.
- ☑ **Simulation Software:** Proficiency in MATLAB, Arena and Simul8 for modelling production processes.
- ☑ **AutoCAD:** Skills in design and drafting software to create, modify, and optimize layouts of industrial systems.
- ☑ **Data Analysis:** Expertise in analysing large datasets to identify trends, anomalies, and areas for improvement.
- ☑ **Communication Skills:** Proficient in explaining complex energy and environmental technology concepts to diverse audiences, enhancing understanding and engagement in various technical and operational settings.
- ☑ **Process Optimization:** Ability to streamline processes to reduce waste and improve efficiency.
- ☑ **Lean Manufacturing:** Experience with methodologies aimed at eliminating inefficiencies and improving quality.
- ☑ **Supply Chain Management:** Understanding of logistics, inventory management, and procurement processes.
- ☑ **Quality Control:** Experience in maintaining product quality standards and using statistical process control (SPC) techniques.
- ☑ **ERP Systems:** Familiarity with Enterprise Resource Planning software Oracle to manage manufacturing and production systems.
- ☑ **Adaptability:** Adapts strategies and interventions to evolving industry trends and specific project needs, ensuring operational flexibility and continuous improvement in energy and environmental outcomes.
- ☑ **Problem-Solving:** Adept at identifying and resolving complex engineering issues, enhancing the quality of operations, and streamlining processes in technical and project environments.
- ☑ **Creativity and Innovation:** Utilizes innovative plans and creative approaches to improve efficiency and the quality of services, influencing overall project productivity and sustainability strategies.

- ☑ **Teamwork and Collaboration:** Proven ability to lead and collaborate within engineering teams and organizations, ensuring concerted efforts that meet environmental objectives and enhance operational efficiency.

PROFESSIONAL EXPERIENCE

Internship | September 2024 - August 2025

MAS Intimates EPZ Kenya

Production Executive

Key Contributions

- ☑ Managed the daily operations of the production department, utilizing Systems Applications and Products in Data Processing (SAP) software to ensure that targets and deadlines were met effectively.
- ☑ Developed and implemented quality control procedures, leveraging SAP quality management to track product quality and maintain established standards.
- ☑ Created and implemented production schedules using Microsoft excel to assign tasks and ensure the timely completion of production processes.
- ☑ Monitored staff productivity and performance, using data-driven insights from performance tracking using Microsoft excel to provide training and support for meeting production goals.
- ☑ Coordinated with other departments, using team viewer and mail software to ensure that all necessary materials and equipment were available for production.
- ☑ Ensured adherence to safety regulations, maintaining equipment and implementing policies in alignment with safety management systems and local laws.
- ☑ Identified potential production issues, such as material shortages or equipment malfunctions, and proactively developed solutions using SAP Predictive Maintenance and Service for troubleshooting.
- ☑ Generated regular reports on production performance, utilizing Microsoft Dynamics 365 and power point software to identify areas for improvement and inform decision-making.

Attachment | January 2023 – November 2023

Bata Shoe PLC

Key Contributions

- ☑ Analysed energy consumption data using Microsoft Power BI and Excel with Power Query & PivotTables to identify inefficiencies, visualize trends, and recommend targeted energy-saving measures.
- ☑ Inspected equipment and systems using SAP Plant Maintenance (SAP PM) to evaluate performance, schedule preventive maintenance, and initiate timely repairs to ensure optimal operation.
- ☑ Proposed energy-saving solutions, including equipment upgrades and retrofits, by leveraging RETScreen for feasibility analysis and AutoCAD for redesigning energy-efficient layouts.
- ☑ Enforced OHS policies and procedures using SAP Environment, Health and Safety (SAP EHS) to ensure compliance with regulations, track safety incidents, and mitigate the risk of fines and penalties.
- ☑ Conducted detailed analysis of production processes using Arena Simulation to identify inefficiencies, reduce bottlenecks, and improve operational performance.
- ☑ Performed root cause analysis with Minitab and SPC (Statistical Process Control) software to resolve quality issues, implement corrective actions, and enhance product standards.
- ☑ Ensured compliance with workplace safety regulations using Cority Safety Software to monitor safety performance, conduct audits and promote a safe working environment.

Internal Attachment | January 2022 – Aug 2022

Jomo Kenyatta University of Agriculture and Technology

Key Contributions

- ☑ Constructed durable walls with bricks, concrete, and stone, ensuring structural integrity through precise mortar and concrete mixtures.
- ☑ Engineered wooden structures and fixtures with meticulous attention to precision and quality.
- ☑ Operated lathes, milling machines, and grinders to manufacture precision metal parts, demonstrating expertise in machine shop operations.
- ☑ Diagnosed and repaired issues in various vehicle systems, ensuring vehicles' safety and roadworthiness.
- ☑ Employed MIG, TIG, and arc welding techniques to join, fabricate, and repair metal components, maintaining strict adherence to safety standards.
- ☑ Enhanced operational proficiency and maintenance capabilities by skilfully operating a variety of plant machinery.
- ☑ Assembled, fitted, and installed machinery and equipment, guaranteeing efficient and safe operation.
- ☑ Executed the casting process by pouring molten metal into Molds, achieving high precision in metal part creation.

EDUCATION

BSc. Energy and Environmental Technology | 2020 – 2024

Jomo Kenyatta University of Agriculture and Technology, 2nd Class Upper

Kenya Certificate of Secondary Education | 2016 – 2019

Njabini Boys High School

LANGUAGES

-
- ☑ English –Proficient
 - ☑ Swahili – Native
