PROFILE SUMMARY

Results driven cybersecurity and DevSecOps engineer with 7+ years of experience securing distributed, cloud-native systems across AWS, GCP, and Azure for global organizations. Proven ability to design security architectures, automate security controls in CI/CD pipelines, and enforce compliance across regulated environments. Proven ability to detect, respond to, and recover from cyber incidents in high-growth multinational organizations. Deep expertise in embedding security into product development, securing connected devices, and enabling principle of least privilege-by-design while supporting rapid business growth.

PROFESSIONAL EXPERIENCE

Cloud Security Engineer

Oct 2023-Present

Upwork, London, UK

- Designed and implemented secure Azure cloud architectures using VM Scale Sets, VNets, NSGs, and identity controls, achieving 99.95% service availability during cloud-native migrations.
- Secured 150+ microservices by integrating Veracode, SonarQube, AWS CloudTrail, Prometheus, and Grafana into CI/CD pipelines for continuous security monitoring and alerting.
- Assessed and enforced AWS IAM policies aligned with NIST CSF, CIS Benchmarks, HIPAA, PCI DSS, and ISO 27001, reducing access-related risks across distributed workloads.
- Developed Python and Bash automation for EC2 scaling and operational security tasks, reducing compute costs by 70% while improving container orchestration efficiency.

DevSecOps Engineer

Feb 2019-Sept 2023

Prudential Insurance PLC, NBO, Kenya.

- Implemented AWS Security Hub, GuardDuty, Datadog, and New Relic to centralize security visibility and detect threats across mission-critical cloud workloads.
- Conducted SAST assessments using Coverity and Bandit to identify vulnerabilities in mobile and web applications, reducing exposure in third-party dependencies.
- Standardized secure CI/CD workflows with Prometheus and Grafana to ensure consistent monitoring and security enforcement across multi-cloud platforms.
- Embedded Terraform and CloudFormation guardrails into DevOps pipelines, achieving a 98% reduction in cloud misconfigurations.
- Designed and enforced encryption strategies for data at rest and in transit, ensuring protection of PHI in compliance with HIPAA requirement.

Cloud Security Architect
Unilever PLC, NBO, Kenya.

Apr 2015-Jan 2019

- Secured workloads on GCP and AWS using Cloud Armor, IAM, RBAC, and network segmentation across GKE, Cloud Run, and Cloud Storage.
- Designed and managed secure container orchestration for 100+ microservices on GKE and EKS and docker ensuring 100% uptime and resilience in a multi-cloud environment.
- Architected secure network and identity frameworks, including VPC/VNet design, segmentation, RBAC/IAM, and monitoring.
- Implemented GCP resource provisioning using Terraform and Ansible to automate VPC, IAM and load balancer management, hence mitigating configuration drift by 92%

Cybersecurity Engineer

Oct 2012-Jan 2015

Nairobi City Water & Sewerage Services Company, NBO, Kenya

- Evaluated newly developed applications through Red Team penetration testing and vulnerability assessments to identify and mitigate security risks such as XSS and SQLi.
- Implemented secure IoT and telematics architectures through devices authentication, encrypted data, and secure OTA updates hence reducing attack surfaces by 85%
- Defined and led the end-to-end cybersecurity and incident response strategy covering cloud, IoT products, manufacturing systems, and customer data.
- Secured Factory 4.0 environments by integrating OT security controls without disrupting production systems.

EDUCATION AND PROFESSIONAL QUALIFICATIONS

University of Nairobi

Master's Degree in Computer Science (Ongoing)

IBM

Cybersecurity Analyst Professional Certificate

Cisco Networking Academy

Certified Ethical Hacker

Cybrary

Certified Information Security Manager (CISM)

University of London Royal Holloway College

Certificate in Information Systems Security

ISC²

Certified Information Systems Security Professional

Google

Professional Google Cybersecurity Certificate
