AI Engineer

Focused on designing and deploying practical AI agent systems. Experienced in multi-step LLM workflows, NLP model development, automation pipelines, and API-based integrations. Committed to building systems that operate reliably in real business environments.

Core Competencies

- LLM Agent Workflows & Orchestration
- NLP Model Training & Fine-Tuning
- Automation System Design (n8n)
- REST API Development & Integration
- Data Processing & Feature Engineering
- Cloud Deployment & Version Control

Technical Skills

- Languages: Python, JavaScript (Node.js)
- Frameworks: FastAPI, Flask, Hugging Face
- ML & NLP: Transformers, DistilBERT, spaCy, scikit-learn
- LLM APIs: OpenAI, Gemini, LLaMA
- Automation: n8n, Zapier
- Tools: Git, Docker (basic), Firebase, REST APIs

Selected Projects

AI Learning Assistant (LLM Agent Workflow)

Developed a multi-step agent pipeline that transforms raw lecture notes into structured study outputs, including summaries and quizzes. Implemented prompt chaining, input segmentation, and REST API integration.

Zinduka Emotion & Urgency NLP Classifier

Built an NLP classification system combining DistilBERT fine-tuning with rule-based linguistic scoring to detect emotional tone and urgency in reports. Applied dataset augmentation techniques to improve performance on limited data.

M-Pesa Daraja + Automated Workflow Integration

Integrated M-Pesa API into backend operations and automated confirmation → logging → notification workflows through n8n, improving operational response reliability.

Referees available upon request.
