PROFESSIONAL SUMMARY

Final-year Data Science student with internship experience in machine learning and credit analytics. Skilled in building end-to-end data solutions—from ETL and anomaly detection to cloud-based dashboards that improve decision-making. Passionate about applying ML and BI to solve real-world business problems.

EDUCATION

Jomo Kenyatta University of Agriculture and Technology
Bachelor of Science in Data Science and Analytics

Expected Graduation: Nov 2025

WORK EXPERIENCE

Kenya Post Office Savings Bank

May 2024 – Sep 2024

Machine learning Engineer and Credit Analyst intern

- Developed anomaly detection logic to flag inconsistencies in loan approvals, improving data quality and decision-making.
- Designed classification pipelines using **scikit-learn** and **NLP** tools to extract insights from unstructured data.
- Collaborated with cross-functional teams to document findings and support BI reporting.
- Applied reproducibility and bias detection techniques, enhancing data integrity and auditability.

LEADERSHIP EXPERIENCE

Head of Young Data Scientists Innovation Club

Jan 2023 – Present

- Led workshops on SQL querying, data modeling, and BI visualization best practices.
- Mentored peers in dashboard development using Power BI and ReactJS.

PROJECTS

Text Summarization

Python | NLP | AWS

- Developed and deployed an **NLP-based** text summarization model to automatically condense lengthy documents into concise, information-rich summaries, improving content accessibility and reducing manual review time by **60%**.

Uber Data Analytics

Python | Google cloud Platform

- Designed and implemented a modern data analytics pipeline on Google Cloud Platform to analyze Uber trip data with over **100K** trip records, leveraging **Mage** for orchestration, **BigQuery** for scalable querying, and Looker Studio for **interactive visualization** of ride patterns and fare metrics.

TECHNICAL SKILLS

Languages: Python, R, Javascript

Databases: MySQL, PostgreSQL

Tools: Docker, Git

Python stack: pandas, NumPy, scikit-learn, TensorFlow/PyTorch, Matplotlib/Seaborn.

Cloud: AWS Lambda, GCP BigQuery, Looker Studio
