

AI Engineer | Data Scientist | Generative AI & NLP Developer

Professional Summary

AI Engineer and Data Scientist specializing in AI Agent Development, RAG Pipelines, and Generative AI applications. Skilled in building and deploying intelligent systems using Python, LangChain, and LLM integration techniques. Experienced in Prompt Engineering, NLP (NER, Sentiment Analysis, Topic Modeling), and API Automation for real-world impact across legal, telecom, and customer experience domains. Recognized for technical communication and thought leadership. I recently delivered a professional talk on AI Agents. Strong background in data analytics, visualization (Tableau), and automation with Python. Proven ability to translate business requirements into scalable AI systems that drive measurable impact.

Technical Skills & Tools

Languages: Python (Pandas, NumPy, Scikit-learn, NLTK, spaCy), SQL
Frameworks & Tools: LangChain, OpenAI API, Flask, Streamlit, FastAPI, TensorFlow, PyTorch
Data & Databases: MongoDB, MySQL, PostgreSQL, Pinecone, Neo4j
Visualization: Tableau, Power BI, Excel
AI & ML Expertise: NLP, RAG Systems, LLMs, Predictive Modeling, Classification, Time-Series Forecasting
Cloud & DevOps: Render, Git, API Integration, MLOps Pipelines
Data Science: Predictive Modeling, Feature Engineering, Time-Series Forecasting, NLP (NER, Sentiment, Topic Modeling)
Collaboration & Communication: Cross-functional Teamwork, Technical Training, Problem Solving, Agile Mindset

Key Projects

LEGAL RESEARCH ASSISTANT WITH RAGMay 2025 - Present

- Designed and deployed a production-ready Retrieval-Augmented Generation (RAG) system (Juddi) using OpenAI API
- Implemented advanced prompt engineering techniques for legal document querying and clause extraction
- Developed a semantic search pipeline using Pinecone for clause-level legal search using the Kenyan Companies Act
- Results: 65% reduction in legal document lookup time, 90% accuracy in clause discovery
- Technologies: LangChain, OpenAI GPT-4, Pinecone, Python, Prompt Engineering

PRODUCT REVIEW INTELLIGENCE SYSTEM WITH LLM & SENTIMENT ANALYSISNovember 2025

- Designed and deployed a hybrid AI system combining Hugging Face sentiment models and Large Language Models for comprehensive product review intelligence.
- Engineered an automated extraction pipeline to identify customer pain points, product benefits, competitive mentions, and risk indicators from unstructured reviews.
- Developed automated business intelligence dashboards for Product, Marketing, and Strategy teams with actionable insights.
- Results: Analyzed 100% of the review corpus (vs. 10% manual sampling), uncovering critical issues enabling ROI-ranked prioritization of product improvements.
- Technologies: Hugging Face Transformers, OpenAI GPT-4, LangChain, Python, Pandas, NLP, Prompt Engineering,

ENTERPRISE CUSTOMER SERVICE AI AGENTOctober 2024

- Developed a customer support analytics system combining structured ticket data and unstructured text logs.
- Implemented topic modeling (LDA) and classification for issue detection and escalation.
- Designed reporting dashboards in Tableau to monitor response times, resolution rates, and customer satisfaction KPIs.
- Results: Achieved 60% faster ticket routing and a 95% satisfaction rate from improved resolution efficiency.
- Technologies: Tableau, Python, SQL, spaCy, NLP.

- Built and deployed a machine learning model to predict customer churn with 85% accuracy and 82% recall.
- Conducted feature engineering and EDA using Pandas, Seaborn, and NumPy on 1,000+ customer records
- Deployed the model via Flask on Render, enabling real-time churn risk scoring for business teams.
- Enhanced retention strategies by 30% through proactive identification of high-risk customers.

Work Experience

Nairobi Data Science Consultancy | AI Training Consultant

May 2025 – Present

- In-person and virtual training services on Prompt Engineering, Large Language Models (LLMs), and Generative AI applications.
- Developing comprehensive AI training curricula for both technical and business-focused teams.
- Designing hands-on workshops covering topics such as RAG (Retrieval-Augmented Generation) and agent-based systems,
- Supporting professionals and teams in understanding LLM integration, prompt design strategies, and real-world AI use cases.
- Actively building partnerships with organizations to deliver tailored AI training and consulting solutions.

Freelance Data Analyst

Jan 2024 – Present

- Partnered with global clients on data analytics and AI-driven solutions across retail, telecom, and legal tech sectors.
- Built Power BI/Tableau dashboards, SQL ETL pipelines, and machine learning models for churn prediction and trend forecasting.
- Applied NLP for sentiment analysis, topic modeling, and customer feedback intelligence.
- Developed lightweight AI agents and RAG-based tools using LangChain and OpenAI APIs to automate reporting and insights.
- Deployed Flask/Streamlit applications on Render for interactive analytics and client delivery.

Digital Data Analyst | Quick Space Media

June 2022 – Dec 2023

- Analyzed website and campaign performance using Google Analytics and Excel, driving improvements in engagement and conversion.
- Monitored user behavior, funnels, and traffic patterns, identifying growth opportunities for marketing campaigns.
- Collaborated with marketing/design teams to create data-driven strategies for UX and SEO.
- Produced weekly dashboards and reports in Power BI/Tableau, ensuring stakeholders had actionable insights. decision-making.

Stalwart Heritage| Data Clerk

June 2021 –May 2022

- Collected, cleaned, and maintained operational and client records to ensure 98% accuracy and compliance with company standards.
- Entered and validated large datasets in Excel and SQL databases, minimizing duplication and data-entry errors.
- Assisted in preparing weekly and monthly reports for management, highlighting key operational metrics and client engagement trends.
- Produced weekly dashboards and reports in Power BI/Tableau, ensuring stakeholders had actionable insights. decision-making.

Ministry of Mining, Nairobi |Analytical Chemist- Attachment

June 2019 – Sept 2019

- Processed and analyzed datasets from experiments using statistical software, ensuring 95% data accuracy
- Applied statistical techniques to ensure the accuracy and reproducibility of lab findings
- Visualized experimental results using charts and graphs to support hypothesis testing and research outcomes.
- Collaborated with scientists to interpret analytical data, contributing to quality control reports that improved lab efficiency

Education and Certifications

Neo4j Database for GenAI Certification | Neo4j Graph Academy

November 2025 - present

Advanced Prompt Engineering Certification | DeepLearning.AI

October 2025- Present

Data Science Specialization | Moringa School

May 2025

Machine Learning Engineering for Production | Coursera

June 2024

Machine Learning Project Implementation | iNeuron

April 2024

BSc Analytical Chemistry | Jomo Kenyatta University of Agriculture and Technology

2016-2021

Referees
