SOFTWARE DEVELOPER/ IT

I hold a Bachelor's Degree in Computer Information Systems from Kenya Methodist University, along with a Certificate in Software Engineering from Moringa School. I am a motivated Software Engineer with a strong foundation in backend development and full-stack web applications. I am proficient in Python, and its frameworks Django and Flask, JavaScript with its framework React, PHP with Laravel, C#, Java, .NET, SQL and NoSQL, with experience in designing, developing, and maintaining scalable applications. I am passionate about object-oriented programming (OOP), software best practices of writing clean, well documented codes. I'm good with teams and love collaborating within Agile teams using git.

I have hands-on experience developing full-stack web applications, designing and implementing RESTful APIs, FastAPI, and integrating secure authentication systems such as JWT. I am also familiar with SSH for secure server access. Through various projects, including a travel journal app and a movie recommendation engine, I have demonstrated my ability to design scalable solutions, solve complex problems, and collaborate effectively within a team. I am eager to leverage programming expertise in **C#, Java, .NET, and modern frameworks** to support Amref Health Africa's mission of lasting health change in Africa.

TECHNICAL SKILL

- **Programming Languages:** C#, Java, Python (Django, Flask), JavaScript (React, Node.js), SQL, Java, PHP (Laravel) .NET Framework
- **Database :** MariaDb, MySQL, NoSQL & Postgres
- **Backend Development:** Django, Flask, PostgreSQL, RESTful API design
- **Frontend Technologies:** HTML, CSS, JavaScript, Bootstrap, Responsive Web Design
- **Software Development:** Object-Oriented Programming (OOP), Agile methodologies (Scrum, Kanban)
- **Testing & Debugging:** Postman, Pytest, Selenium, JIRA, Cypress

- **Security & Authentication:** JWT, OAuth, Secure Coding Practice

TECHNICAL PROJECTS

eCommerce System – [ecommerce app](#)

A full-stack eCommerce web application where users can browse products, manage their carts, place orders, and track deliveries.

Tech Stack: Django (Backend), React (Frontend), PostgreSQL, AWS S3, JWT Authentication

- Developed a RESTful backend API with Django, enabling secure user authentication with JWT.
- Integrated AWS S3 for handling product image uploads and scalable media storage.
- Designed and implemented a PostgreSQL database schema to store products, users, orders, and cart data.
- Created dynamic and responsive React components for product listings, checkout flow, and user dashboards.

Hotel Management System -

<https://github.com/denning01/phase-1-project---HOTEL-MANAGEMENT-SYSTEM>

The Hotel Management System is designed to streamline the operations of a hotel. It manages reservations, guest check-ins and check-outs, room assignments, billing, and other essential functions.

- Fetch API: JavaScript can send the data to the server using Fetch API in a POST request to create a new record in the backend (adding a new guest or room booking).
- DOM Manipulation: JavaScript dynamically updates the HTML DOM to display the data (listing available rooms in a table).
- Event listeners: JavaScript listens for a click event on a delete button next to each record.
- Validation: Ensures data is valid before sending it to the backend.

ACADEMIC QUALIFICATIONS

2024 Course : Software Engineering
 Institution: Moringa School

2019 – 2023 Course: Bachelor of Science in Computer Information Systems
Second Class Honours (Lower Division)
 University: Kenya Methodist University

2014 – 2018 Course: Kenya Certificate of Secondary Education (KCSE) –
 Institution: St Mary's School Yala

PROFESSIONAL EXPERIENCE

Adanian Labs - Software engineer March 2025 - June 2025

- Contributing to the development of a Lending System that leverages AI to monitor transactions and assess customer credibility.
- Working with Python (Django) and MariaDB for backend development, ensuring secure and efficient data management.
- Developing frontend components using React, HTML, CSS, and integrating backend services with PHPs laravel.
- Utilizing Kubernetes & Docker for containerization and deployment to ensure a scalable and consistent development environment.
- Collaborating on AI-driven analytics to enhance financial decision-making within the system.

- Implementing authentication, data validation, and transaction handling to ensure security and compliance.
- Debugging and optimizing system performance for improved user experience.

Freelance(SOFTWARE ENGINEER) - 2023 - 2024 Nairobi, Kenya

- Developed RESTful APIs using Flask and PostgreSQL, ensuring secure authentication with JWT.
- Assisted in designing and implementing cloud-based solutions on AWS for scalable applications.
- Collaborated on projects involving API integrations, authentication, and data management.
- Collaborate with engineers and product managers to ensure the quality and readiness of features before release.
- Conduct API testing with Postman and k6 to validate backend services.
- Track and document software defects in JIRA, categorizing by severity and priority.
- Analyze product performance, identify bottlenecks, and propose enhancements.

IT Support Intern Parliament of Kenya September 2022 - December 2022

- Setting up and troubleshooting LAN, WAN, and VPN connections.
- Monitoring and maintaining server performance.
- Managing firewalls, switches, and routers.
- Ensuring systems comply with organizational IT policies.
- Resetting passwords and handling account security measures.
- Monitoring and maintaining computer systems and networks.
- Performing regular system updates and patches.
- Managing antivirus and cybersecurity measures to protect systems.

REFEREES

1. **Mr. Clement Kipkirui**
Senior Software Engineer
Adanian Labs
Email: ckipkirui@gmail.com
Phone: +254727473832

2. **Dr. David Kaje**

Lecturer, Computer Information Systems

Kenya Methodist University
