PROFESSIONAL SUMMARY:

I am a seasoned and highly skilled IT Professional with diverse experience in managing complex IT projects and delivering innovative solutions. Proven expertise in system administration, network infrastructure, and cybersecurity, formulating, developing, and implementing effective strategies, standards, management policies, and procedures with a strong focus on optimizing IT operations providing technical support across multiple locations and enhancing organizational efficiency. Adept at leading cross-functional teams and collaborating with stakeholders to align IT initiatives with business goals. Demonstrated ability to implement best practices, leverage emerging technologies, and ensure the highest levels of data security and compliance. Known for troubleshooting complex technical issues and providing strategic IT guidance to drive business growth. Seeking a challenging position to apply my in-depth knowledge and leadership skills in an innovative and dynamic IT environment.

EDUCATION:

- ❖ Bachelor Of Computer Application, Rani Durgavati Vishwavidyalaya (Formerly University of Jabalpur – India), 2001-2005
- ❖ Kenya Certificate of Secondary Education (KCSE) – Nyanchwa Mixed High School, 1995-1998

SKILLS SUMMARY:

- | | |
|--|---|
| ❖ Network Administration and Cybersecurity | ❖ Software and Hardware Lifecycle Management |
| ❖ Technical Troubleshooting and Support | ❖ Change Management and Cloud computing |
| ❖ IT Infrastructure Planning and Implementation | ❖ Innovation and Technology Trends |
| ❖ Risk Assessment and Mitigation | ❖ Vendor and Contract Management |
| ❖ Virtual Environment solutions (VMWare & Hyper-V) | ❖ Budgeting, Inventory and Asset Management |
| ❖ System Administration and Business Continuity | ❖ Windows AD/LDAP, MS Azure, AWS, GCP |
| ❖ IT Strategy, Standards and Policy Implementation | ❖ Customer Service and Windows 7/8/10/11, MAC |

WORK HISTORY:

IT Consultant | ISS Global Forwarding | Mar 2021 – Up to Date

- ❖ Coordinate and oversee the management of the company's information technology infrastructure in Africa, Europe, and Asia Pacific regions.
- ❖ Maintain a globally deployed, supported and flexible Microsoft 365 infrastructure that includes Office 365, Enterprise Mobility & Security, Azure Active Directory, mail backup, anti-spam, and device remote wipe.
- ❖ Manage user Identity lifecycle (Joiner / Mover / Leaver), role-based access controls (RBAC), and access request workflows, OneDrive, mailboxes, security, SharePoint, and distribution groups, ensuring alignment with ICT policies by enforcing IAM policies, and endpoint security
- ❖ Provide expertise in the specification of business requirements, performance levels and changes and service requests, ensuring traceability back to desired business outcomes.
- ❖ Enhance network security by installing and managing firewalls, switch, Access Points, data encryption, VPNs, VPN gateways, Intune, MDM, LAN, WAN, TCP/IP, L2 & L3 Connectivity, SD-WAN, and endpoint protection.
- ❖ Design and deploy LANs, WANs, and WLANs; create network documentation; and manage network hardware.
- ❖ Coordinate with Service Desk and support teams around the globe for issue resolutions to deliver solutions that meet the needs of the business.
- ❖ Collaborate closely with global cross-functional teams to ensure the stability, scalability, and security of the Active Directory and Azure Active Directory/Entra ID environments, MFA and Okta. Lead discussions on all aspects of identity and access management.
- ❖ Acts as the focal point of contact in the region for incidents, problems and changes to the Microsoft 365 and Azure Active directory services and Azure hybrid environments, including deployments, backups, and disaster recovery plans.
- ❖ Manage, coach and mentor IT team in my region by conducting regular performance evaluations

- ❖ Create and maintain detailed documentation of Microsoft 365 infrastructure, processes and procedures.
- ❖ Work with Business Units, IT Development, and IT Infrastructure team members to ensure overall performance meets/exceeds service level objectives
- ❖ Ensure compliance with data protection regulations (e.g GDPR) and oversee the development and execution of data protection compliance and training programs for employees
- ❖ Work with key region vendors and conduct performance assessments in accordance with Company process.
- ❖ Actively participate in operational ITIL processes i.e. Incident, Change Management, Release Management, Problem Management, Best Practices and Availability Management.

Regional IT Service Desk Analyst | ISS Global Forwarding | Feb 2019 – Mar 2021

- ❖ Collaborated with the Global IT team to drive the use of technology, implement IT standards and policies, and provide technical support and solutions in Africa, Europe, and Asia Pacific regions.
- ❖ Managed deployment, monitoring, maintenance, development, upgrades, and support of infrastructure platforms – Computers (Windows and Mac), printers and scanners, CISCO, Fortinet Firewalls, Aruba HP Switches, Access Points, TP JetStream, Ubiquiti etc.
- ❖ Triageed and responded to 1st level security alerts, investigating potential security incidents and escalating where necessary to protect assets and data.
- ❖ Create, maintain and develop SharePoint sites and libraries as required for the use of document storage and ensure all relevant staff follow the permission guidelines and best practices.
- ❖ Implemented and managed company network, Microsoft 365 services – MS DAX, Power BI and environments.
- ❖ Administered Active Directory, Group Policy, and user permissions – SharePoint, OneDrive, Teams.
- ❖ Implemented IT strategies, policies, procedures, and standards that support the company's business goals and growth objectives by conducting regular IT assessments and audits to identify opportunities for improvement, innovation and guide the company's technology practices.
- ❖ Oversaw the design, deployment, and maintenance of IT infrastructure, including networks, servers, etc by ensuring the security, availability, and optimal performance of IT systems to support business continuity and business needs.
- ❖ Stayed updated on industry trends and emerging technologies, positioning the company at the forefront of innovation by Collaborating with business units to identify technology solutions that drive business growth and service excellence.
- ❖ Established and managed IT service delivery processes, including incident management, problem resolution, change management, and service requests by monitoring feedback, complaints, and concerns related to service delivery, or equipment and work to address them effectively to maintain high levels of stakeholder satisfaction
- ❖ Implemented cybersecurity measures to protect company and client data, ensuring compliance with industry standards and regulatory requirements.
- ❖ Developed and maintained IT disaster recovery and business continuity plans to minimize risks associated with system failures and data loss.
- ❖ Ensured compliance with data protection regulations, addressing any gaps as necessary.
- ❖ Maintained strong relationships with key stakeholders, including senior management, and addressed their technological needs and negotiated and managed contracts with external vendors to optimize value and performance.
- ❖ Maintained the day-to-day operations of configuration management platforms including application deployment and settings distribution
- ❖ Performed routine maintenance tasks such as system backups, updates, and patch management.
- ❖ Supported for other locations/offices as appropriate, either via use of remote tools or ad hoc site visits.

IT Service Desk Analyst | Inchcape Shipping Services – UNSOS Project | Apr 2016 – Jan 2019

- ❖ Completed maintenance activities as directed by the Regional IT Manager (RITM) Middle East, India and Africa (MEIA) region, including AV updates and patching through SCCM.
- ❖ Supported and drove WMS (Warehouse management system) configurations and Access rights.
- ❖ Provided responsive 1st and 2nd line technical support to end users, enabling them to undertake their roles in a secure and professional environment.

- ❖ Requisitioning, maintenance, disposal, repair and/or upgrades and managing security of the physical and virtual components of IT such as security of server rooms and installation of virus protections and firewalls, including configuration, patching, and policy compliance
- ❖ Responded to and resolved IT service requests and incidents via phone, email, chat or in-person, ensuring timely resolution and maintaining high levels of customer satisfaction.
- ❖ Diagnosed and troubleshooted hardware and software, escalating more complex issues via tickets raised and assigned in the ticketing system (Itarian, Salesforce, Zoho and Freshdesk Remedy/ITSM tools)
- ❖ Onboarding: Onboarding new members of staff, ensuring that their IT services, laptops and other devices are ready to go on day one by managing the Active Directory, PowerShell, Autopilot and intune.
- ❖ Contributed to the development and maintenance of a knowledge base, creating and updating support documentation and user guides.
- ❖ Worked with the Procurement & Asset team to ensure all end user IT assets are captured and the asset management system is kept up to date.
- ❖ Worked with the Cyber Security Engineer to assist in maintaining security compliance across the end user environment (laptop, mobile devices) including multi factor authentication, access to data, anti-virus protection, threat detection and loss of service.
- ❖ Ensured all IT activities comply with company policies, procedures, and security standards.
- ❖ Provided technical support to local and roaming/ remote users by deploying, maintaining, and troubleshooting desktops, laptops, printers, PDA, Cisco Routers/Switches/ Access Points, handheld devices and barcode readers, Hypervisor: VMware vSphere and End User Compute: Citrix XenApp.
- ❖ Assisted to install, maintain and troubleshoot Windows servers, Network and system testing to ensure hardware and software run smoothly.
- ❖ Ability to travel at short notice and facilitate site IT support activities where appropriate.

IT Administrator / Lead | Vision Plus Technologies | Apr 2012 – Mar 2016

- ❖ Led and managed a team of technical professionals, including hiring, training, performance management, and KPI setup and monitoring to adhere to IT security policies, standards, procedures, and controls to protect the organization's data and systems from cyber threats.
- ❖ Guided and advised the team to provide first and second levels of support within the agreed SLA by setting clear performance objectives and conducted regular performance evaluations
- ❖ Oversaw the delivery of IT services to internal stakeholders and external clients.
- ❖ Monitored service performance against SLAs and KPIs, and take corrective actions are taken for prompt availability of IT infrastructure, including servers, networks, storage systems, and cloud services.
- ❖ Continuously improved service delivery processes and procedures to enhance efficiency and effectiveness.
- ❖ Coordinated with other IT teams to ensure seamless service delivery and resolution of issues.
- ❖ Monitored and analyzed security alerts, incidents, and events to identify potential issues and security threats
- ❖ Handled employee satisfaction surveys, analyzed reports, and shared recommendations accordingly
- ❖ Ensured the availability and constant update of the Systems and the underlying services inventory
- ❖ Collected and reviewed system-related reports for capacity and planning purposes
- ❖ Ensured that all IT incidents and service requests were handled according to agreed procedures and ensured that documentation was available and in an appropriate form for the IT specialist team.
- ❖ Ensured that appropriate action was taken to anticipate, investigate, and resolve problems in systems and services, ensuring that such problems are fully documented within the relevant system(s).
- ❖ Coordinated the implementation of agreed remedies and preventative measures and analyzed patterns and trends, provided Feedback to management about the system-related issues faced by the business users to improve the performance.
- ❖ Evaluated new technologies and shared recommendations accordingly
- ❖ Prepared and presented regular reports to executive leadership, highlighting key metrics, incidents, and trends.
- ❖ Provided recommendations for continuous improvement based on regular assessments, feedback, performance data, and industry best practices and developed and implemented service improvement plans to address identified areas for enhancement.

- ❖ Managed the suppliers' SLAs and ensure that they are in line with SLA targets.
- ❖ Measure and report on the outcomes of service improvement initiatives to demonstrate value to stakeholders.
- ❖ Monitored and ensured adherence to SLAs for service delivery and support requests by tracking incidents and oversaw timely resolution to minimize operational disruptions.
- ❖ Implemented effective escalation processes for high-priority incidents and ensure service continuity and disaster recovery plans and reviewed supports metrics to identify improvement areas and drive process optimization.
- ❖ Managed change control processes and ensure alignment with operational standards.
- ❖ Developed and managed the IT department budget, allocating resources effectively to meet business needs while controlling costs. Track expenses, forecast future spending, and justify budget requests to senior management.

Network and Systems Administrator | The Karen Hospital | Jan 2012 – Mar 2012

- ❖ System Management: Oversaw the installation, maintenance, procurement, and enhancement of hardware and software systems. Ensured optimal performance and reliability of all IT resources.
- ❖ Network Administration: Managed network servers and technology tools. Monitored system performance and managed security protocols to ensure data protection.
- ❖ Asset Management: Managed inventory of IT assets, ensuring proper documentation and availability of hardware and software.
- ❖ Tech Support: Provided leadership for the IT support team by ensuring timely resolution of internal and customer-facing technical issues.
- ❖ Project Management: Lead IT projects, including system upgrades, migrations, and integrations. Ensure projects are delivered on time and within budget.
- ❖ Vendor Management: Negotiated with software and hardware vendors to procure technological solutions that were cost-effective and met our operational requirements.
- ❖ Security Oversight: Developed and implemented security protocols to protect data and IT systems from cyber threats. Conducted regular security audits and updates.
- ❖ Training and Development: Organized training sessions for staff to ensure they were proficient in using technology and systems effectively.
- ❖ Strategic Planning: Assisted in planning for IT growth and system scalability as the company expands. Provided insights and forecasts for budgeting and strategic decision-making.
- ❖ Assisted in providing Systems Administration, including user accounts, rights configuration, and troubleshooting access problems on Network, Peripherals, PABX, Biometric system, CCTV, and Hospital systems.

Head of ICT | Ram Hospital - Kisii | April 2009 – Mar 2010

- ❖ Network and Systems Administration: Ensured that the hospital's network, servers, and databases were running efficiently and securely. This includes managing data storage systems, ensuring high availability, and maintaining backups.
- ❖ Hardware and Software Maintenance: Oversaw the procurement, installation, and maintenance of hardware (like computers, servers, and medical devices) and software applications used throughout the hospital.
- ❖ Data Protection: Implemented cybersecurity measures to protect patient data and other sensitive information from breaches. This involved regular security audits, implementing encryption, educating staff on best practices, and developing disaster recovery and business continuity plans.
- ❖ Compliance: Ensured that the hospital's IT systems complied with relevant regulations and standards for data protection and patient privacy.
- ❖ Developed and implemented ICT policies and procedures while also collaborating with other departments to understand their technological needs
- ❖ Technical Support: Provided Technical support to hospital staff for any ICT-related issues, ensuring that systems were running smoothly and that problems are resolved quickly to avoid disruptions in patient care.
- ❖ Training: Organized and conducted training sessions on New Technologies for hospital staff and ensured they were proficient in using IT systems and understanding security protocols.

- ❖ Developed and managed the IT budget.
- ❖ Implemented new technologies to improve patient care and hospital efficiency.
- ❖ Managed IT projects from inception to completion.
- ❖ Ensuring the hospital's IT infrastructure is scalable and adaptable to future needs.
- ❖ Prepared and presented reports on IT performance and initiatives to hospital leadership.
- ❖ Managed the Microsoft Server environment, including the DHCP Server for managing IP distribution, DNS Server for proper domain and outside name resolution, IIS Server for Outlook web email access for employees, and File Server for user centralized data access and Exchange server for emails.
