EXPERIENCE

Bluestock | Software Development Engineer

Remote | October 2024 - December 2024

- **Coding & Troubleshooting:** Developed and debugged software applications using Java, JavaScript, HTML, CSS, and MySQL, ensuring high performance and resolving complex technical issues to meet customer requirements.
- **Collaborative Problem Solving:** Worked closely with cross-functional teams to identify, diagnose, and resolve technical challenges, providing solutions tailored to user needs and ensuring high-quality software developer.
- **Testing & Optimization:** Conducted thorough testing of applications to identify bugs, improve system efficiency, and enhance user experience.
- **Continuous Learning & Improvement:** Embraced new tools and technologies, continuously upgrading my skill set and applying this knowledge to improve the quality and scalability of the software solutions developed

Internshala | Web Developer

Remote | August 2022 - February 2023

- **Developed & Troubleshoot Web Applications:** Gained hands-on experience in web development, troubleshooting issues, and optimizing front-end and back-end components to improve website performance and user experience.
- **Customer-Centric Problem Solving:** Worked on understanding and resolving bugs and issues faced by users, applying problem-solving skills to provide efficient solutions.
- **Applied Development Best Practices:** Gained proficiency in technologies such as HTML, CSS, JavaScript, and server-side languages to build dynamic, user-friendly websites.

SKILLS

Programming Languages: C, Java, HTML, CSS, SQL

Libraries/Frameworks: JavaScript, Apex

Tools / Platforms: Git, GitHub, CI/CD, Jenkins, Docker, Postman, REST APIs

Databases: MySQL, MongoDB

PROJECTS / OPEN-SOURCE

IPO Web Application & REST API Development SDK: Python (Version 3.12.3) Framework: Django (Version 5.0.6) - `pip install Django` API: Django REST Framework (Version 3.15.1) - `pip install Django rest framework` Tools: Postman for API testing, Git & GitHub for version control

Develop a web application and REST API that provides IPO-related information to the public. The application will

display information such as company logo, name, price band, opening and closing dates, issue size, issue type, listing date, status,

IPO price, listing price, listing gain, current market price (CMP), and current return. Additionally, it will include downloadable RHP

and DRHP PDFs.
